

Flock Cameras

Harris County Municipal Utility District No. 495 (the “District”), in consultation with the Harris County Precinct 5 Constables, has decided to fund the installation of fourteen (14) Flock cameras at the entrances to and exits from the District.

Flock cameras read and record license plate numbers. This data is only accessible by law enforcement officers and helps them trace stolen cars, serve outstanding warrants and identify theft rings, among other uses. They are widely used in Houston and the surrounding neighborhoods.

The cameras are being installed in phases by Flock Group Inc. (“Flock”) under a contract among Flock, Harris County, and the District. Flock must obtain a separate permit from Harris County for each Flock camera it installs. Therefore, there is no set time for completion.

For more information about Flock cameras generally, please see the attached publications developed by Flock which answer commonly asked questions. If you have any comments or questions about Flock cameras, you may email the District at har495@txdistricts.info or address the Board at any public meeting of the District. The meeting schedule is set forth on the website.

The District believes the Flock cameras will deter criminal activity and enable the Constables to identify suspects. We will be analyzing their effectiveness over time and will make adjustments as needed.
